

# 5 Best VS-Code Extensions for Web Developers

# 1

## Quokka

This extension is used for testing JavaScript code in the Visual Studio Code editor itself instead of checking it out in the browser console.

# 2

## Browser Preview

This extension is used for opening a real browser inside the VS Code editor to debug and check the changes you have made to the code, instead of checking them on the browser each time.

# 3

## Better Comments

This extension is used for differentiating comment types like warnings, errors, highlights, and queries to improve the readability and understandability of the code.

# 4

## Prettier

Prettier is a useful tool that automatically formats your code using opinionated and customizable rules.

# 5

# GitLens

GitLens is another powerful extension that helps you take full advantage of Git source control in Visual Studio Code.
