Git Tips

10 Git Usages You Should Know to Avoid

1. Do not commit directly to the master, release, dev branches.
2. Do not commit the application secrets (.env/.env.* files).

**3. Do not treat Git as file storage.
stay away from storing large
files.**

**4. Do not work on multiple issues
in the single branch.**

5. Do not Ignore .gitignore

6. Do not Force Push.

7. Do not modify or delete the commit history.

8. Do not reset a branch without committing changes

9. Do not make Bulky Commits

10. Do not amend a commit in the
remote casually.
