Count API

The Count API gives you the ability to create numeric counters and track the number of times a page was visited.

The screenshot shows the CountAPI landing page. The header features a purple gradient background with the text "123" in a large, stylized font, followed by "CountAPI" and the tagline "Counting should be easy, right?". Below the header, there's a section titled "CountAPI" with a brief description: "This API allows you to create simple numeric counters. IaaS, Integer as a Service." It also lists three operations: "It goes down to:" followed by a bulleted list: "Create a counter and restrict its operations", "Reset the value of a counter", and "Increment/decrement a counter".

Benefits Of Using API

This API helps to query financial summary, stocks, quotes, movers, etc... to create a financial site/application such as Yahoo Finance.

The screenshot shows the Yahoo Finance API Specification page. At the top, there are navigation links: Specification, Tutorial, Pricing, Dashboard, and Sign in. Below that, the title is "Yahoo Finance API Specification 1.0.0 OAS3" with a link to "yahoo-finance-api-specification.json". A sub-header states "Real time low latency Yahoo Finance API for stock market, crypto currencies, and currency exchange". On the left, there's a "Servers" dropdown set to "https://yfapi.net - Base URL" and an "Authorize" button with a lock icon. On the right, there's a collapse/expand arrow. The main area is titled "API" and lists three endpoints:

Method	Endpoint	Auth
GET	/v6/finance/quote	🔒
GET	/v7/finance/options/{symbol}	🔒
GET	/v8/finance/spark	🔒

TempMail Api

A Disposable Temporary E-mail service which self destructs after a certain time elapses.

The screenshot shows the Temp Mail API interface. On the left, there's a sidebar with four buttons: 'Copy' (document icon), 'Refresh' (refresh icon), 'Change' (gear icon), and 'Delete' (cross icon). The main content area has a title 'Temp Mail API'. Below it, a note says: 'This api was created in order to automate the registration process at the various sites.' A yellow callout box contains the note: 'Note: Temporary email is a service without restriction. All incoming emails are removed within approximately 10 minutes after admission.' Another section, 'Access to the API:', states: 'Available completely free of charge and without restriction. Why is it free? We're testing the system load and optimizing code.' A 'How it works:' section lists steps: 'Generate email address by using our domain names.', 'Sign up on sites that require confirmation by mail.', 'The site sends email to the address you specify.', 'Message comes to our SMTP server, processed and added to the database.', 'You make a request to the API with md5 hash of mail address.', and 'You get a list of emails.' A final note in a yellow box says: 'Note: You can generate absolutely any email address without API notification'.
